

	LF BPV		HF HRV	
	power	power	power	power
	Baseline	13.11	1924	
	120 Hz	8.60	2068	
	30 Hz	9.61	950	
	30 Hz + 5 kHz	16.04	1634	
	Baseline	6.04	926	
	120 Hz	4.59	772	
	30 Hz	5.25	1827	
	30 Hz + 5 kHz	2.64	666	
	Baseline	2.21	287	
	120 Hz	0.66	996	
	30 Hz	4.46	1495	
	30 Hz + 5 kHz	<i>Recording corrupted</i>		
	Baseline	3.55	4644	
	120 Hz	45.50	13640	
	30 Hz	4.03	12694	
	30 Hz + 5 kHz	3.35	9077	

Supplemental Data Figure 3: Spectral Power for **A)** blood pressure variability and **B)** heart rate variability. **C)** Analysis with bound low (0.05-0.15 Hz) and high frequency (0.20-0.30 Hz) heart rate and blood pressure variability. While pooled stimulated tended to increase LF BPV and HF HRV powers after SCI and decrease these powers in matched, uninjured controls, these trends did not meet standards for significance.

SBP= systolic blood pressure; RRI= R-R interval in milliseconds; LF= low frequency; HF= high frequency; BPV= blood pressure variability; HRV= heart rate variability
